WEALTHVIEW · APP RETENTION ANALYSIS

Fixing Android identity verification can recover WealthView's lost growth

MAU fell 18% after the March onboarding redesign. The cause is a broken verification step, not the app itself.

Sumayyah Syed · October 2026 · Synthetic data, Sep 2025 – Jul 2026

Monthly active users are down 18% since the March redesign

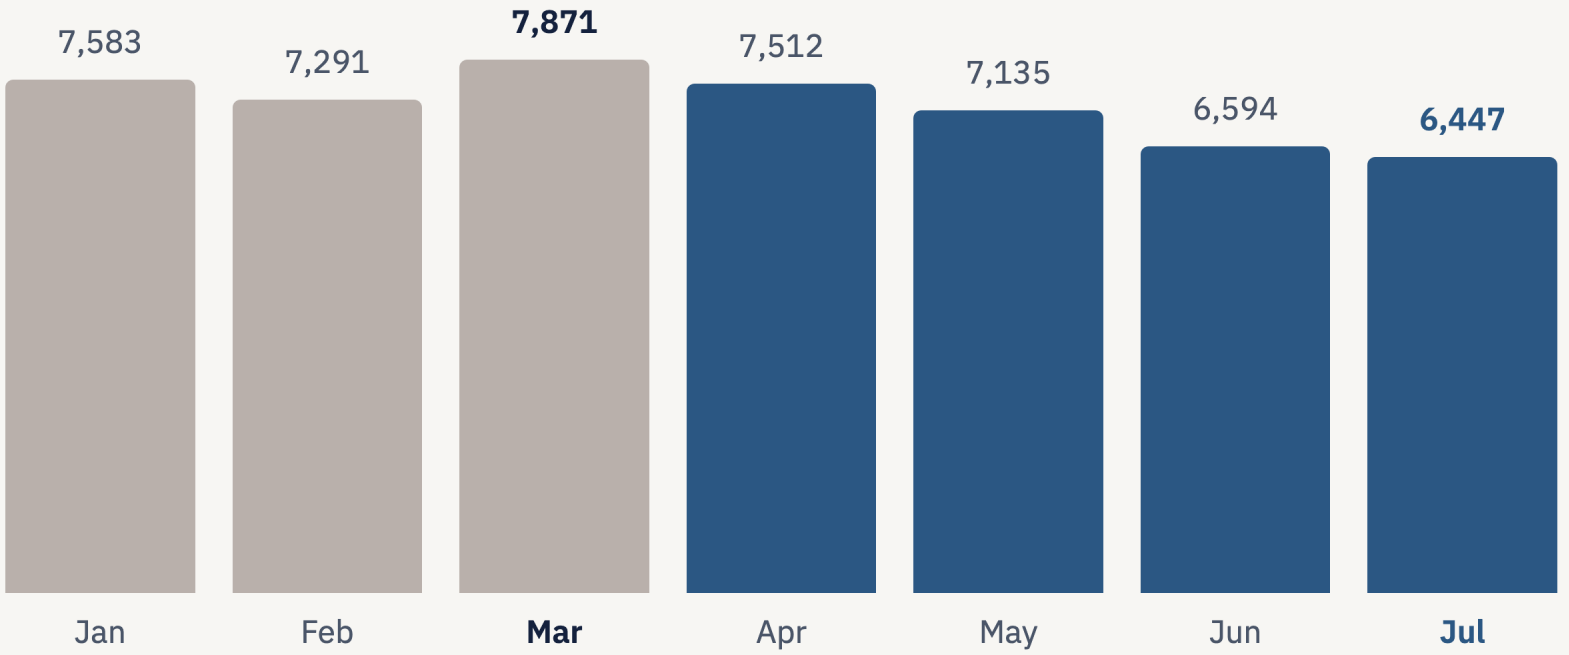

March 2026 (peak)

7,871

July 2026

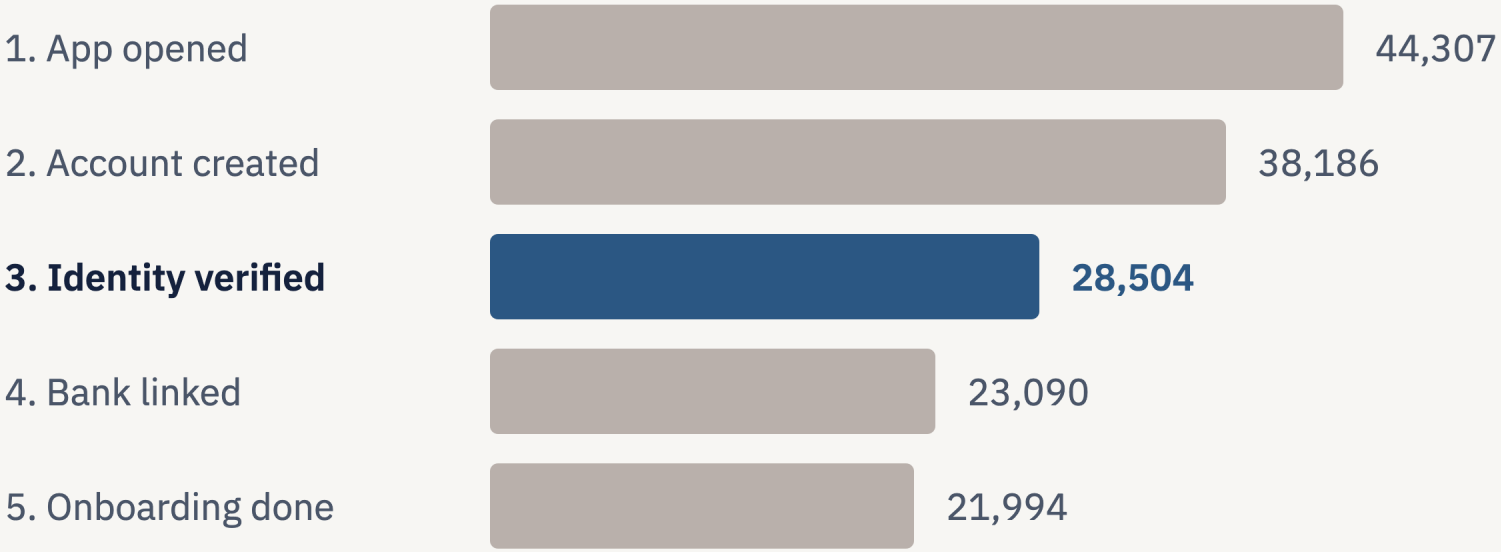

6,447

–18.1% in four months

Identity verification is the biggest leak in onboarding

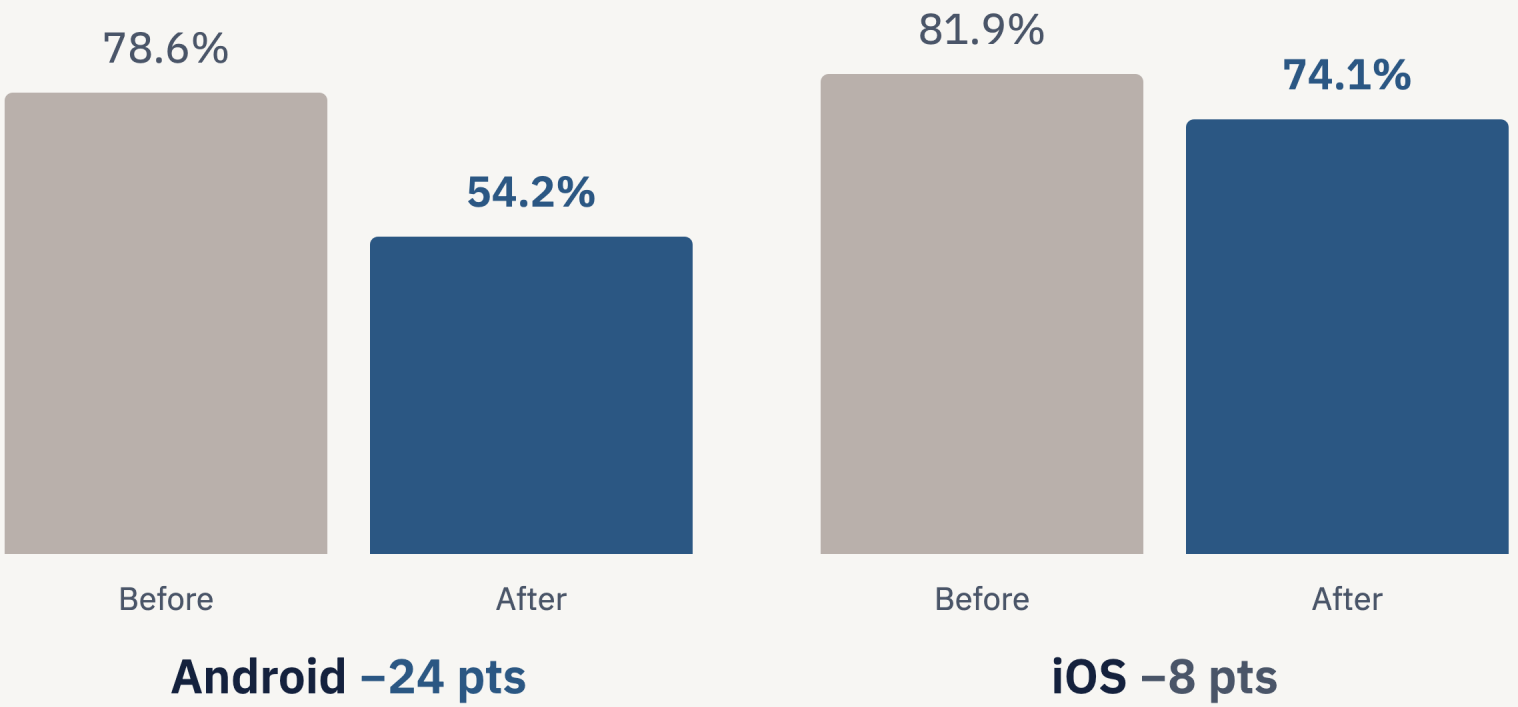

9,682

users quit at verification: **1 in 4** of everyone who created an account

All users, Sep 2025 – Jul 2026. Source: sql/03_onboarding_funnel.sql · 3

The redesign cut Android verification from 79% to 54%

Activation fell from **54% to 43%** the week the redesign launched on March 15.

The drop is three times larger on Android, pointing to a **platform-specific problem** in the new verification flow.

Users who get in stay just as long as before

GETTING IN

Activation rate (finished onboarding)

54% → 43%

Down 10 points after the redesign

STAYING

Day 30 retention of activated users

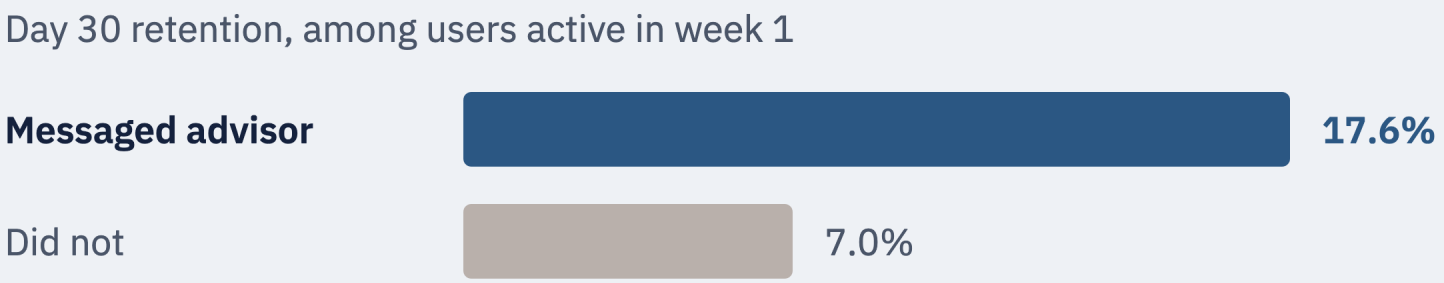

8.1% → 8.2%

No change after the redesign

The app still keeps the people it gets. **The problem is the front door, not the product.**

Weekly signup cohorts, Jan – Jul 2026 (D30 only where 30 days of data exist). Source: sql/05_retention_cohorts.sql · 5

Messaging an advisor in week 1 goes with 2.5× better retention

Other features: users who used them retain 1.6–1.8× better

22%

of new users message their advisor in week 1, the least-used feature with the strongest link to retention

Correlation, not proof: committed clients may simply message more. **Next step is an A/B test of a week-1 advisor nudge.**

Activated users with 30+ days of data who returned in days 1–7. Source: sql/08, sql/09 · 6

Fixing verification ranks first by a wide margin

#	Improvement	Reach	Impact	Confid.	Effort	RICE
1	Simplify identity verification (Android first)	9,000	3	80%	6	3,600
2	“Finish verifying” reminder	3,100	1	60%	1	1,860
3	Week-1 advisor messaging nudge	4,500	2	50%	3	1,500
4	Shift spend from paid social to referrals	2,600	1	70%	2	910
5	“Link a bank account later” option	5,900	1	50%	4	738
6	Personalized insights feed	4,500	0.5	30%	5	135

RICE = Reach × Impact × Confidence ÷ Effort. Reach = users per quarter (from the data); effort in person-weeks (estimated). The reminder ranks high only because it’s cheap, and its reach shrinks once #1 ships.

A simpler verification flow lifted Android completion 8 points

Onboarding completion, all

+4.0 pts

43.5% → 47.5% · p = 0.026

Onboarding completion, Android

+8.1 pts

37.0% → 45.1% · p = 0.002

Support tickets (guardrail)

−32%

6.0% → 4.1% · improved

Fraud flags (guardrail)

Watch

0.15% → 0.79% · p = 0.08

The test

4 screens → 2, auto-capture of ID, clearer errors. Same KYC checks. 50/50 split of new users, 1,546 per group, 4 full weeks.

The caveat

The fraud rise isn't significant, but it rests on about 1 vs 6 flagged users. Too few to call it safe, so roll out in stages.

Recommendation: ship the new flow in stages, then test the advisor nudge

WEEKS 1–2

Roll out to all Android, half of iOS

Biggest gain where the redesign hurt most.

ONGOING

Monitor fraud weekly with risk

Alert if flags pass 0.5% of completed onboardings.

WEEK 3+

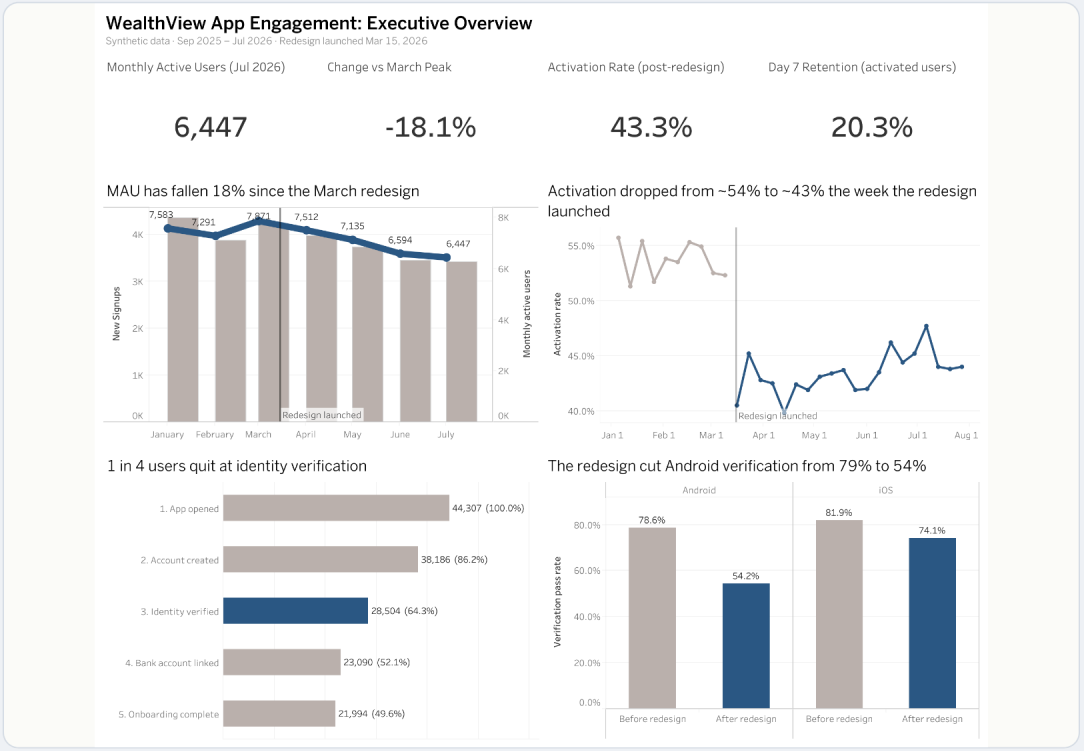

Full rollout, then the next test

A/B test the week-1 advisor nudge to see if the link is causal.

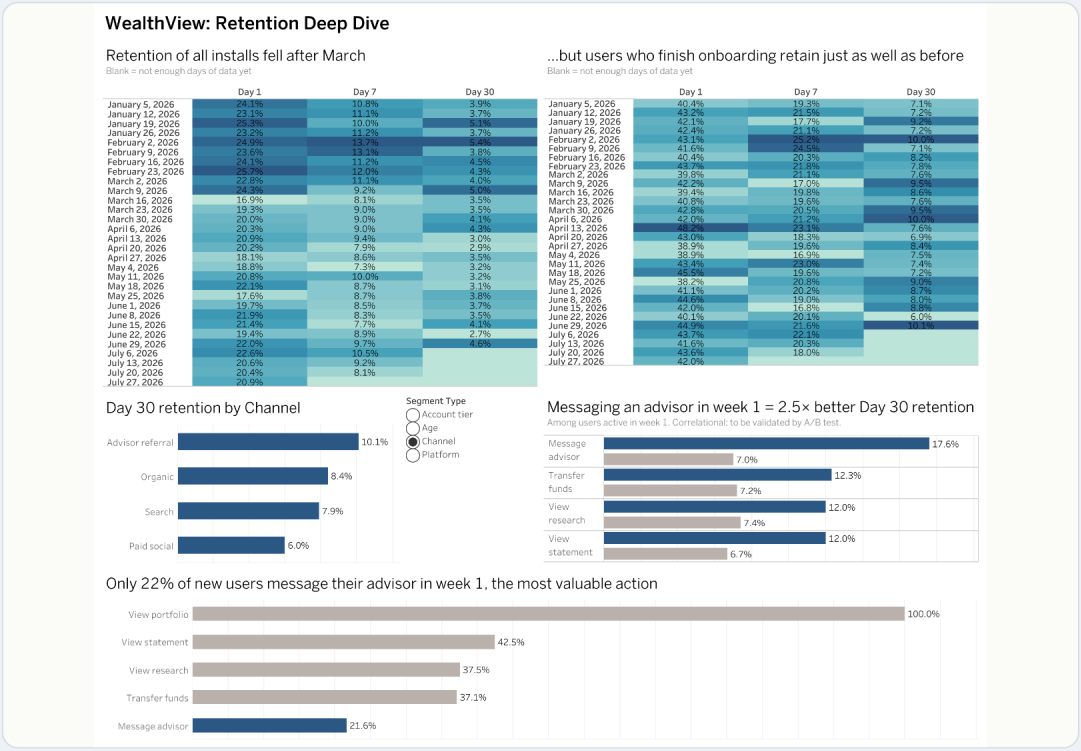

~420 more activated users per quarter from a 4-point lift, recovering about 40% of what the redesign lost. Verification still has room to improve.

Based on ~10,500 new installs per quarter · 9
